

Amendments to the Specification:

Please amend the Abstract paragraph on page 26 as follows:

A method, system and computer instructions ~~are disclosed~~ for visually representing telephone call tree interfaces for interaction by users of data network phones, such as, for example, wire-line telephones, data network telephones, or IP telephones. A caller can connect to an automated telephone answering service, and view a display of an interactive, visual interface for a call tree. The display can depict actions that can be taken with respect to ~~[[the]]~~ nodes of the call tree. The visual interface can show details about one or more nodes of the call tree, and the caller can select a node for interaction and enter a wait queue associated with the selected node. For example, the caller can use a wire-line telephone, wireless telephone, data network telephone, or IP telephone to interact with, navigate and/or modify the displayed call tree.
